<sup>1</sup>Expressed as a percentage of export price.

Note The margins of dumping reported in the table above are the margins determined by the CBSA for the purposes of the final determination of dumping. These margins do not reflect the anti dumping duty to be levied on future importations of dumped goods. In the event of an injury finding by the CITT, normal values have been provided to the exporters which provided sufficient information for future shipments to Canada and these normal values would come into effect the day after the injury finding. Information regarding normal values of the subject goods should be obtained from the exporter. Imports of subject goods from exporters/producers that did not provide sufficient information to the CBSA during the dumping investigation and who are not listed in the table above will be subject to the All Other Exporters anti dumping duty rate pursuant to a ministerial specification.

As reported in the table above, the amounts of subsidy (as a percentage of export price) are the amounts determined by the CBSA for purposes of the final determination of subsidizing. These amounts do not reflect the countervailing duty to be levied on future importations of subsidized goods originating in or exported from China, which will be based on the specific amounts of subsidy (Chinese yuan per kilogram), converted into Canadian dollars.

Normally, normal values will not be applied retroactively. However, normal values may be applied retroactively in cases where the exporter does not adjust export prices to account for increases in domestic prices and/or costs. Therefore, where substantial changes occur in prices, market conditions, costs associated with production and sales of the goods, the onus is on the concerned parties to increase the export price accordingly to ensure that any sale made to Canada is not only above the normal value but at or above selling prices and full costs and profit of the goods in the exporter's domestic market.
